

People Make Change! Improving outcomes and experience across the pathway of care

Calum McGregor

National Clinical Lead for Acute Care with
Healthcare Improvement Scotland

Transport Museum

People Make Change – Learn and design better systems

1. Respond to opportunities for improvement taking a whole system and person-centred approach

Share SPSP approach to whole system improvement

2. Categorise enablers and barriers and apply the learning to improve the recognition and treatment of deteriorating patients across the pathway

Examples from the deteriorating patient workstream – applying QI methods and developing culture of improvement

3. Have a clear understanding of the deteriorating patient pathway across the secondary and primary care interface

Focus on patient journey

SEPSIS IN SCOTLAND 2012

- 25% of patients with severe sepsis receiving IV antibiotics within an hour
- <http://www.stag.scot.nhs.uk/SEPSIS/Main.html>

BARRIERS to quality across the pathway of care

- Poorly designed systems
- A culture not receptive to quality improvement
- Unwanted variation
- Silo working with poor communication
- Patient/carer voice not being heard

Poorly Designed Systems

“The Aggregation of Marginal Gains”

Poorly Designed Systems / Opportunities to Improve

- Antibiotics not in department
- Patient going to X-ray prior to antibiotics and fluids
- Triage system not robust enough to prioritise sick patients
- Nursing staff not informed of STAT antibiotic prescription
- MEWS added incorrectly
- Not applicable section on form
- Medical Students....
- Lack of awareness
- WE'RE TOO BUSY!

Consultant: _____ Assessment time: _____

Assessing Doctor: _____ Designation: _____
Signature: _____ Bleep: _____

INITIAL ASSESSMENT AND MANAGEMENT OF SUSPECTED SEPSIS

Suspected infection?

SIRS Criteria (please tick)

- HR > 90 bpm
- RR > 20 per minute
- Temp < 36 or > 38
- WCC < 4 or > 12

SIRS Score 2 or above?

YES

Treat as Sepsis

1. Complete Sepsis 6 Bundle
2. Prompt Antibiotics
3. Consider source of infection
4. Assess severity

NO

Treat as per hospital guidelines
Unlikely to need IV antibiotics

SEPSIS BUNDLE
Complete for all patients with suspected sepsis within **ONE HOUR**

	Tick/Initial	Not applicable	Time
1 BLOOD CULTURES			
2 ROUTINE BLOODS + LACTATE			
3. IV FLUIDS (FLUID CHALLENGE - UNLESS EVIDENCE OF FLUID OVERLOAD)			
4. IV ANTIBIOTICS			
5. OXYGEN IF REQUIRED (aim sats >94%, unless COPD, then 88-92%)			
6. MEASURE URINE OUTPUT (CONSIDER CATHETER IF HYPOTENSIVE)			

Suspected Source of Sepsis: _____

Antibiotics Administered:
(Refer to local antibiotic policy)

Sepsis Problems/Audit form | Acute Services | Page 1 of 2
Pub. date: 01/08/13 | Review date: 01/08/14 | Issue No: 02
OH no. _____

AIM and STRATEGY

- To reduce mortality and harm for people in acute hospitals by reliable recognition and response to acutely unwell patients
- Outcome Measures:
 - HSMR
 - Sepsis Mortality Rate
 - Cardiac Arrest Rate

METHOD for improvement

Model for Improvement

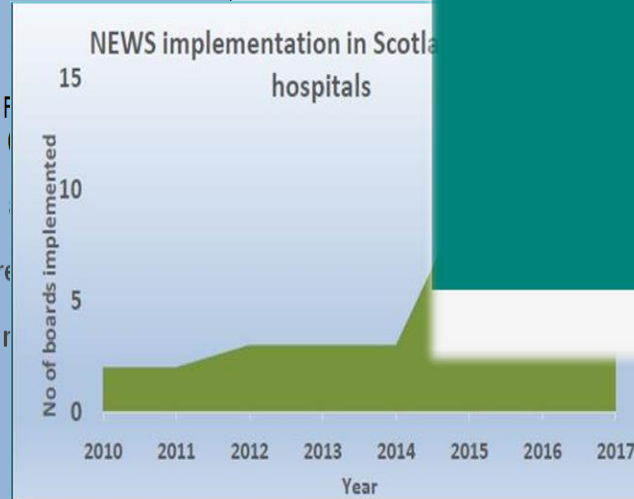

Deming WE 1994 'The New Economics: For Industry, Government, Education' MIT Press: Massachusetts p41

National Improvement

Aim	Primary Drivers
95% of people with physiological deterioration in acute care will have a structured response and person centred care plan	Early, anticipatory planning and person centred care
	Reliable recognition of acute deterioration
	Structured response to acute deterioration

Sepsis Toolkit

orbidity review that informs improvement plans
 ac arrests/2222 calls to inform improvement pl
 ation officers in education and improvement
 priority: Executive Sponsorship, Clinical Leade

- Palliative Care and QI support
- Consider use of electronic track and trigger tools to actively manage patients across the sites.

Where to focus? – Local Improvement

Aim	Primary Drivers	Secondary Drivers
95% of people with physiological deterioration in acute care will have a structured response and person centred care plan	Early, anticipatory planning and person centred care	<ul style="list-style-type: none"> • Anticipatory care planning in Community Care • Patient and family at the centre of decisions and planning • Reliable communication across care pathways • Assessment of functional capacity, health trajectory and detection of limited reversibility • Reliable implementation of national DNACPR policy
	Reliable recognition of acute deterioration	<ul style="list-style-type: none"> • Accurate observations using NEWS • Observations are performed at correct frequency • Healthcare staff are trained in recording of observations and escalation process. • Healthcare staff use NEWS as an adjunct to clinical knowledge in recognition of acute deterioration
	Structured response to acute deterioration	<ul style="list-style-type: none"> • Screen for all causes of deterioration including sepsis, and initiate Sepsis Six if appropriate • Appropriate care givers meet, agree and document a plan including frequency of observations and review time • Ensure timely review by appropriate decision maker according to local triggers • Monitor accurate fluid balance, • Document treatment escalation plan (after discussion with patient and family where appropriate) including resuscitation status, senior review and goals of care.
Reduce CPR attempts (chest compressions and/or defibrillation and attended by the hospital-based resuscitation team - or equivalent – in response to the 2222 call) in general ward settings	Structured review of acute deterioration	<ul style="list-style-type: none"> • Risk of deterioration is considered with appropriate care plan documented • Limited reversibility is considered and documented in people at risk of acute deterioration • Treatment escalation plan reviewed and updated, including DNACPR where appropriate • Communications with patient and family on management plan
	Reliable communication within and across multidisciplinary teams	<ul style="list-style-type: none"> • Hospital huddles and ward safety briefs highlight deteriorating patients & describe plan • Structured wards round in acute care – reliable review of treatment escalation plan • Reliable ongoing patient and family communication that informs treatment escalation plan • Use SBAR to handover across MDT and care teams
	Create a learning system	<ul style="list-style-type: none"> • Mortality and morbidity review that informs improvement plans • Review of cardiac arrests/2222 calls to inform improvement plans • Involve resuscitation officers in education and improvement • Organisational priority: Executive Sponsorship, Clinical Leadership, Executive Lead for Palliative Care and QI support • Consider use of electronic track and trigger tools to actively measure and manage at risk patients across the sites.

Understand Own Systems

- The measurement and monitoring of safety. Vincent et al. 2013

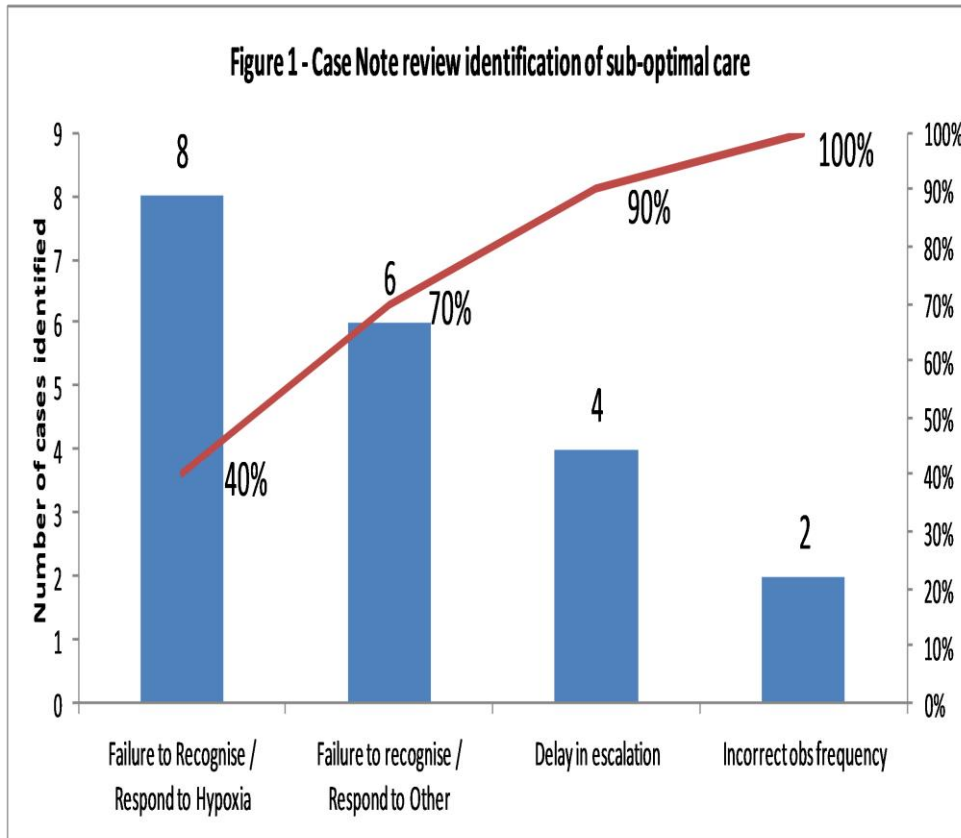

Make it easy for staff to do the right thing

Reliable implementation of the observation bundle

Reduce Unwanted Variation

Do not write on or obscure!

Affix Patient ID Label wholly inside this region

Family Name: _____
Given Name: _____

STU Hospital No: _____ Gender: _____
NHS No: _____ DOB: / /

Affix Patient ID Label wholly inside this region

A TEP describes the interventions that would be considered in the event of a clinical decision being changed then this form should be scored through with black ink, a decision maker, and the date undertaken. A new form should then be completed

Date of admission: _____

Is the patient at high risk of deterioration? (If no tick no, stop here, and sign form)

Is this patient for resuscitation? If Yes stop here. If No complete the DNACPR form and complete the 'Clinical Reasons' and 'Treatment options' sections below and sign form.

Clinical Reasons for treatment limitation - details must be documented in the healthcare record for not having discussions with patient / family.

Has a discussion with patient / Lasting Power of Attorney (Welfare) occurred?

Has a discussion with relatives / carers / other occurred? If 'yes' record name, relationship to patient and content of discussion in the patient record.

Has a discussion with other members of the health care team occurred? If 'yes' record name(s) and roles in the patient record.

Treatment options

Should ITU care be considered?

Should HDU care be considered?

Should Critical Care Outreach input occur?

Should referral for consideration of inotropic support occur?

Should referral for consideration of BIPAP (non-invasive ventilation) CPAP occur?

Should referral for consideration of haemodialysis (artificial kidney) occur?

Should insertion of central venous access be considered?

Should enteral nutrition be considered?

Should referral for parenteral nutrition be considered?

Should intravenous antibiotic therapy be considered?

Should intravenous fluids be considered?

Should the patient be for palliative care?

If the patient is for palliative care only and deteriorates should the ICP for the Last Days of Life be considered?

Other treatments / tests not to be undertaken? (please state)

Healthcare professional completing this TEP order

Treatment Escalation Plan (TEP) Medical High Dependency Unit Crosshouse Hospital

Affix patient ID label

Surname
First name
Address
DOB
CHI No.

Instructions For Completion - complete in the context of patient's current condition only. Further guidance notes on the reverse side.

Circle Yes or No to indicate appropriate ceiling of treatment on the flow diagram

- When possible involve patient/next of kin in decision making and document in medical & nursing notes
- If this conversation has not been possible summarise below and document rationale in medical & nursing notes
- TEP should be completed by Consultant or trainee working at ST6 or above
- TEP should be reviewed at every ward round or whenever clinical circumstances change & documented in patient's daily progress sheet

Valid Only In Medical High Dependency Unit

Yes / No For full escalation

If Yes, complete discussion box only at bottom of page
If No, continue completion to identify appropriate treatment options

Yes / No For CPR

If No, complete DNACPR form
Yes or No - Always continue completion to identify appropriate treatment options

Yes / No Referral to ICU

Yes / No BIPAP

Yes / No CPAP

Yes / No HI flo O₂ delivery

Yes / No Refer to renal team for renal replacement therapy

Yes / No Inotropes

Yes / No Central line

Yes / No Invasive monitoring

Yes / No PEG/NG feeding/medicines

Yes / No IV antibiotics

Yes / No IV fluids

Yes / No *specify other

Other instructions/comments:

Raigmore Hospital

TREATMENT ESCALATION PLAN

TEP/CPR (tick box to confirm)
CPR form completed

Affix patient ID label

Name: _____
CHI number: _____
Date of birth: _____

THE APPROPRIATE CEILING OF TREATMENT BELOW (tick a single box)

ICU

Medical HDU

Antibiotics

Investigations/blood testing

Intensive care of life care

Escalation of care ↑

Other instructions:

Review date (optional):

Reason for limited ceiling of treatment:

Treatments are unlikely to be successful

Treatments are not in accord with applicable advance healthcare directive/decision

Patient does not wish these treatments

Other: _____

Does patient have capacity? YES / NO

Capacity checked? YES / NO

Information on KIS? YES / NO

Welfare attorney? YES / NO

Discuss WITH: nursing staff patient relative(s) welfare attorney or guardian

Communication with patient and/or relatives/welfare attorney (continue on reverse if required):

Agreed with patient, document reason:

Completing Form (must be ST1 or above):

Name: _____ Grade: _____ Date & time: _____

Endorsed by SENIOR CLINICIAN (complete at earliest available opportunity):

Name: _____ Grade: _____ Date & time: _____

Do not substitute for clinical judgement. Review decisions if the clinical situation changes and at ward. See guidance for completion of TEP and instructions for revocation on reverse.

Cede Power to Patients

Help patients make informed decisions

NHS SCOTLAND

Medicine Sick Day Rules

When you are unwell with any of the following:

- Vomiting or diarrhoea (unless only minor)
- Fevers, sweats and shaking (unless only minor)

Then STOP taking the medicines ticked on the other side of this card by your healthcare professional

Restart when you are well (after 24-48 hours of eating and drinking normally)

If you are in any doubt, contact your pharmacist, doctor or nurse

SCOTTISH PATIENT SAFETY PROGRAM
