National Health Care Institute

Is there a leading patient role in implementation of integrated birth care?

(Zorginstituut Nederland)

Uriëll Malanda Senior policy advisor Glasgow, february 29

#Quality2019 #QFE3

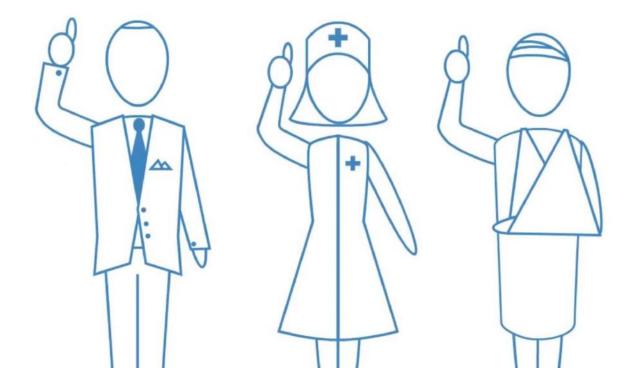

### **Declaration of interests**

**Uriëll Malanda** declares that he has no personal-, organisational- or financial interests, nor interests of related parties to declare.

### National Health Care Institute

### Our three ambitions

These ambitions give directions to our daily activities on quality, affordability and accesibility of health care

affordable health care system

better care faster available informed citizens

### Take home messages

Getting patients in the lead means involving them throughout the whole proces: from policy making to implementation.

Design patient participation together with and not without the patient.

Patient 'leadership' requires an intrinsic drive

# Anne Mooij, Dutch Patientfederation Patiëntenfederatie Nederland

### Is there a leading role for patients?

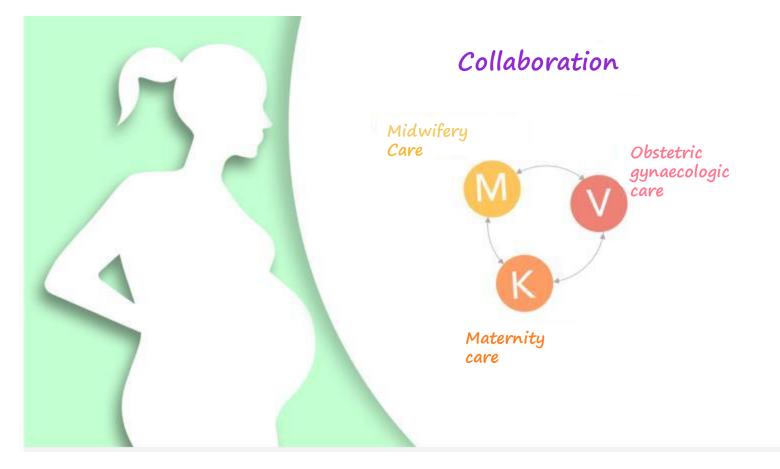

Summarized:

"If we want a leading role for patients in integrated birth care, the point of departure should be to involve patients in every initiative, project and decision."

"Somehow, patient participation does not really get off the ground."

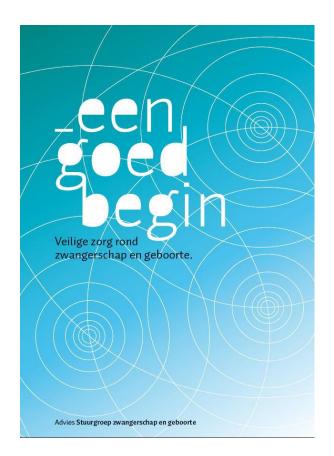

### Integrated birth care in the Netherlands

### Patient participation embedded in policy

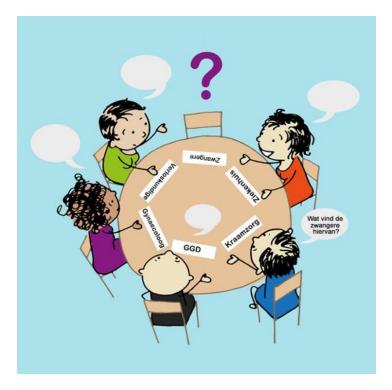

Develope a care standard integrated birth care with:

- Mother and child in a leading role
- Stimulate patient participation
- Integrated environment for learning
- Shared Decision Making

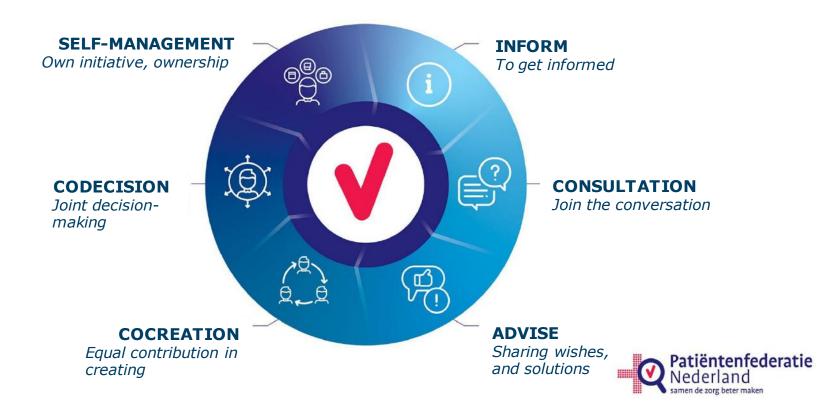

# Why implement patient participation in integrated birth care?

- To build a regional perspective on patient centered care
- To learn from feedback from patients
- To get all players in birth-care involved
- To identify and act on topics that really matters to patients <sup>1</sup>

### Types of patient participation

# Implementation of patient participation

80 Obstetric collaborative regions:

- Several mixed forms observed
- Acceptance by careproviders is challenging
- Trouble **finding members** for the council
- Regular **input** from young parents is lacking

### Instructions

Consult your neighbour left and right and discuss:

- What strikes you in this fragment?
- What will you take home to use in your own situation.

# Cynthia van Stiphout -Geboortehart Hoorn e.o.

# Patricia Eikelenboom -Ouderadviesraad Nijmegen

## Discussion

- What striked you?
- What will you take home?

### Notable 'quotes'

Summarized:

Patient ownership is needed on how patient participation should be organised.

Involvement and advice of patients in policy making is valued by all parties

An intrinsic drive to represent the patients perspective is essential

### Take home messages

- Getting patients in the lead means involving them throughout the whole proces: from policy making to implementation.
- Design patient participation together with and not without the patient.
- Patient 'leadership' requires an intrinsic drive

# Anne Mooij, Patiëntenfederatie Nederland

### Thanks to:

This presentation was not possible without the input of:

Patiëntenfederatie Nederland

Moederraad Geboortehart

Ouderadviesraad Nijmegen

# Together – for best possible health and equal care

# Passion for life – social movement

•To incite senior citizens to take their own responsibility for preventive work for as rich and healthy life as possible

• To find messengers who can communicate knowledge and methods and spread ideas

https://www.youtube.com/watch?v= BJ7TZ-n-044

# 2014 - Passion for life won first prize in EU contest "Social innovation in ageing – The European Award"

The prize is awarded by the Belgian royal family fund, the King Baudouin Foundation for the renewal of work in the area of the elderly.

# Healthcafé

Create meeting points for people to support each other...

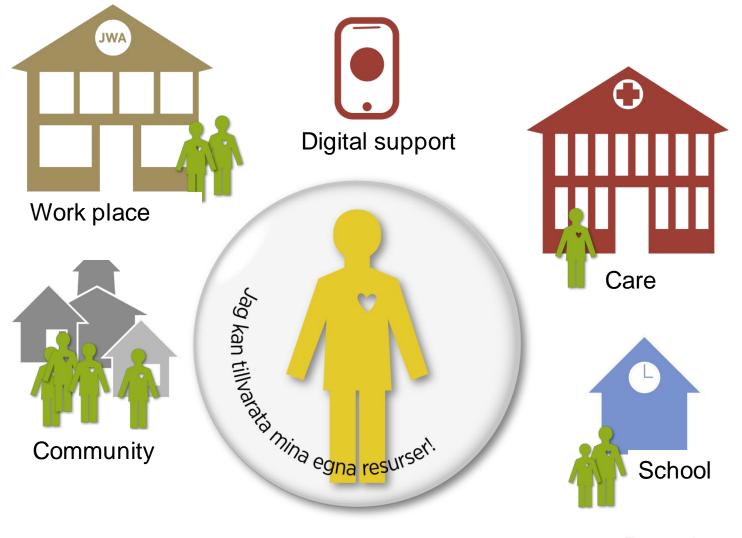

Here, people who live with chronic diseases and their relatives are able to meet and create a network that gives support and knowledge to support health.

- House of heart
- Live for living
- Café brain
- Living library

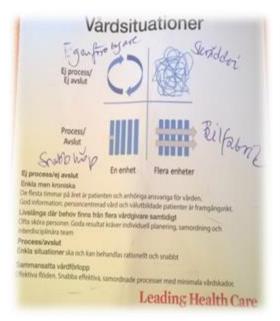

Region Jönköpings län

# One size doesn't fit all!

We need to work in co-production and develop deeper understanding for how we interact and develop services together

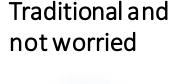

# People are different, have different needs and expectations in different situations

Independent and committed

Worried and committed

Vulnerable and worried

# What is a service?

- Co-creation of activites and the value they create together
- Cooperation between producers and consumers
- Created and consumed at the same time

"In co-production a service occurs that none of the people involved had been able to create by themself"

# A lot of prioritised identified areas

**Big scale transformation** 

Collaborative

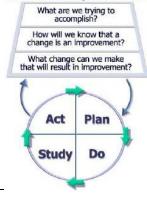

for different needs

Concept – change package

Coaching and digital support

#### **Model for Improvement**

#### Region Jönköpings län

# Patient compact: a concept in four parts

# Values make it happen

# Shared responsibility

- Improve health and care
- Empower the patients to believe in their own capabillity and use it from the perspective of what matters to them.
- Empower the patient and create possibilities for a partnership with health care.
- Both patients and caregivers care for time spent
- Co-production patients and caregivers

Patientkontrakt, SALAR

# What will your patient compact look like?

### How we build a learning platform for transformation of a whole Health and Care system that revolves around the patient

- We always start with "What matters for Esther?"
- Leadership at macro level tells the direction, gives support and asks for and follow-up results.
- Employees together with patients design new way of working
- Standardised QI support to work systematically and visualise the movement
- Learning by doing catch learning research
- Meetingpoints pieces and whole picture deeper understanding for the need for cooperation and co-production.
- Joy gives energy to the journey

All this is a challenge in big system and needs humility and an ongoing dialogue to support trust and power for action.

# Together – for best possible health and equal care
