# Practical Approach to Care Kit

**Clinical Decision Support and tools  
to equip and empower  
Primary Health Care Clinicians & CHWs**

**Knowledge Translation Unit, University of Cape Town Lung Institute  
in partnership with  
British Medical Journal**

# PACK PROGRAMME : PRACTICAL APPROACH TO CARE KIT

Goals: Equip & empower PHC clinicians & CHWs

Enable UHC & SDG's

## Pillar 1: Guide

Evidence based,  
symptom focused,  
integrated  
decision support

## Pillar 2: Training

educational  
outreach approach,  
case-focused,  
team-based

## Pillar 3: Health systems

**strengthening**

Task-shifting &  
task sharing,  
meds/tests/equip  
availability

## Pillar 4: M & E

Audit – registers,  
evaluate – training  
feedback, & focus  
groups, research

- **Target audience:** ALL clinicians who deliver primary care: Nurses & Midwives, Doctors, Health Officers, CHW's
- **Sector:** Primary and Community Care
- **Countries:** Low and Middle Income countries
- **Developed in South Africa** over last 18 year & scaled to >3,000 clinics >30,000 health workers
- **Programme made available globally** through partnership between UCT Lung Institute KTU and BMJ and being implemented in Brazil, Nigeria & Ethiopia. Substantial interest from other countries & partners

**KTU vision:**

**“Improving primary healthcare  
- most underserved communities”**

**BMJ vision: “A Healthier World”**

**Impact & Sustainability**

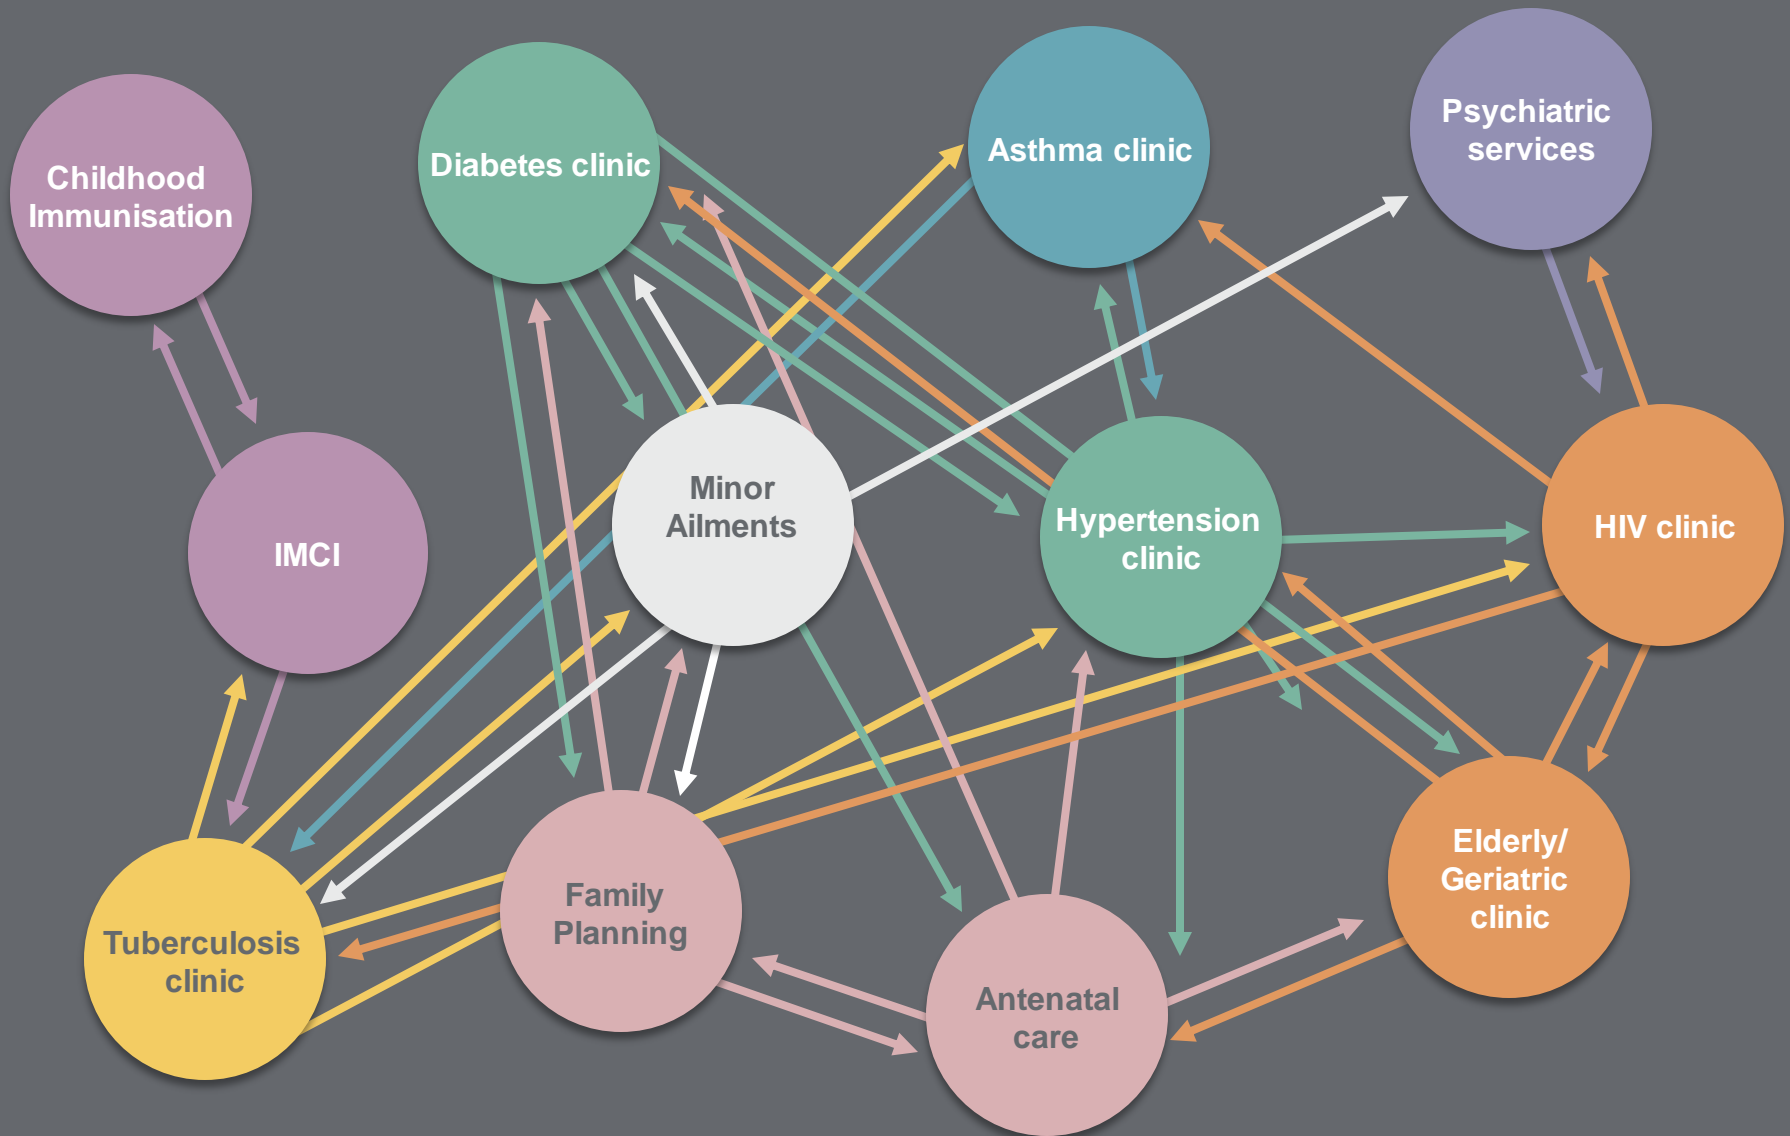

Many patients

# Many symptoms, conditions and concerns

# Too much information – too many books

# Too many complex illnesses and co-morbidities:

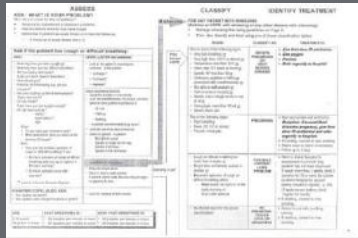

## Top 15 reasons for encounters in primary care in SA

Reason	n	%
Cardiovascular follow up	2592	10.0
Cough	1943	7.5
Pregnancy/ family planning follow up	1354	5.2
Headache	1231	4.8
Prevention/immunisation	591	2.3
General body pain	547	2.1
Fever	481	1.9
Throat symptom/ complaint	442	1.7
Endocrine meds	421	1.6
Back symptom/ complaint	413	1.6
Abdominal pain generalised	411	1.6
Diarrhoea	391	1.5
Immunological follow up	387	1.5

# 24 editions in first 14 years

# Guide: Principles

- Comprehensive: covering commonest symptoms and chronic conditions:
  - NCDs: Diabetes, Hypertension, Asthma, COPD, MI, Stroke
  - Communicable diseases: TB & HIV
  - Mental health
  - Women's health
- Evidence-informed: W.H.O. + BMJ Best Practice
- Integrates multiple guidelines and policy into single resource
- Concise (116 pages)
- Simple algorithms and checklists
- User-friendly, accessible, point-of-care, clinical decision-support
- Intended to be localised to be policy-aligned
- Translated
- Updated annually (via linkage to BMJ Best Practice)

***PACK extracts, compiles and harmonises primary care content from multiple guidelines and policies into a single document.***

# Guide: symptom-based approach

## Contents: symptoms

Assess and manage the patient using his/her symptoms as a starting point

<b>A</b>		<b>E</b>		<b>J</b>		<b>R</b>	
Abused patient	55	Ear symptoms	15	Jaundice	50	Rape	55
Abdominal pain	22	Eye symptoms	13	Joint symptoms	36		
Abnormal vaginal bleeding	32					<b>S</b>	
Aggressive patient	53	<b>F</b>		<b>L</b>		Seizures	5
Anal symptoms	25	Face symptoms	14	Leg symptoms	39	Sexual problems	33
Arm symptoms	38	Fatigue	9	Lymphadenopathy	8	Skin symptoms	43
		Fever	7			Difficulty sleeping	56
<b>B</b>		Fits	5	<b>M</b>		Stressed patient	54
Back pain	37	Foot symptoms	40	Miserable patient	54	Suicidal patient	52
Bites	42	Foot care	40	Mouth symptoms	17	Syphilis	31
Blackout	10						
Body pain	35	<b>G</b>		<b>N</b>		<b>T</b>	
Breast symptoms	21	General body pain	35	Nail symptoms	51	Throat symptoms	17
Burns	42	Genital symptoms	26	Neck pain	38	Tiredness	9
Difficulty breathing	19			Needlestick injury	103	Traumatised patient	55
		<b>H</b>		Nose symptoms	16		
<b>C</b>		Headache	12	<b>O</b>		<b>U</b>	
Cervical screening	30	Heartburn	18	Overweight patient	70	Genital ulcer	26
Chest pain	18					Unconscious patient	4
Collapse	10	<b>I</b>		<b>P</b>		Urinary symptoms	34
Coma	4	Injured patient	41	Body/general pain	35		
Confused and/or disruptive patient	53			Pap smear	30	<b>V</b>	
Constipation	25					Abnormal vaginal bleeding	32
Cough	19					Violent patient	53
						Vision symptoms	13
<b>D</b>						Vomiting	23
Diarrhoea	24						
Dizziness	11					<b>W</b>	
Dyspepsia	22					Weakness	9
Genital discharge	26					Weight loss	6

# Guide: Integrating chronic care

## Contents: chronic conditions

Diagnose and give routine care to the patient with a chronic condition

### Tuberculosis (TB)

Tuberculosis (TB): diagnosis	57
Drug-sensitive (DS) TB: routine care	59

### HIV

HIV: diagnosis	62
HIV: routine care	63

### Chronic respiratory disease

Asthma and COPD: diagnosis	67
Using inhalers and spacers	67
Asthma: routine care	68
COPD: routine care	69

### Chronic diseases of lifestyle

Cardiovascular disease (CVD) risk: diagnosis	70
Cardiovascular disease (CVD) risk: routine care	71
Diabetes: diagnosis	72
Diabetes: routine care	73
Hypertension: diagnosis	75
Hypertension: routine care	76
Heart failure	77
Stroke	78
Ischaemic heart disease: diagnosis	79
Ischaemic heart disease: routine care	80
Peripheral vascular disease	81

### Mental health

Admit the mentally ill patient	82
Depression: diagnosis	83
Depression and/or generalised anxiety: routine care	84
Alcohol/drug use	85
Schizophrenia: diagnosis	86
Schizophrenia: routine care	86
Dementia	88

### Musculoskeletal disorders

Chronic arthritis	89
Gout	90
Fibromyalgia	91

### Epilepsy

92

### Women's health

Contraception	93
The pregnant patient	95
Routine antenatal care	97
Routine postnatal care	99
Menopause	101

### End of life

102

Communicate effectively	1
Prescribe rationally	2
Screen the patient in the prep room	3
Protect yourself from occupational infection	103
Protect yourself from occupational stress	104
Helpline numbers	105

# Weight loss

## Give urgent attention to the patient with weight loss on ART:

- Weight loss in the patient on ART associated with one or more of: nausea, vomiting, abdominal pain, difficulty breathing or tiredness.

### Management:

- Patient needs same day lactate measurement →64.

- Check that the patient that says s/he has unintentionally lost weight has indeed done so. Compare current weight with previous records and ask if clothes still fit.
- Investigate unintentional weight loss of > 5% of body weight.

## First check for TB, HIV and diabetes

- Start workup
- At the same time
- and consider

**TB**

→72

- If status unknown
- The HIV patient has fever > 1 month

**HIV**

noea or

- Check glucose
- To interpret

**Diabetes**

## Ask about symptoms of common cancers:

Abnormal vaginal discharge/bleeding

**Cancer**

Urinary symptoms in man

Change in bowel habit

Cough ≥ 2 weeks, blood-stained sputum, long smoking history

Consider **cervical cancer**.  
Do a speculum examination →30.

Consider **breast cancer**.  
Examine breasts/axillae for lumps →21.

Consider **prostate cancer**.  
Hard and nodular prostate on rectal examination →34.

Consider **bowel cancer**.  
Mass on abdominal or rectal examination, occult blood positive.

Consider **lung cancer**.  
Do chest x-ray.

## If food intake inadequate, look for a cause:

Nausea and/or vomiting

Loss of appetite

Ask, 'Are you stressed?'

No money for food

The patient has an incurable illness and you would not be surprised if s/he died within the next year

Sore mouth or difficulty swallowing

→23.

- Eat small frequent meals.
- Drink high energy drinks (milk, soup, sweetened fruit juice).
- Increase energy value of food by adding sugar, milk powder, peanut butter or oil.

**Depression**

If available, refer to social worker.

**End of life care**

**Oral/oesophageal thrush** likely  
→17

Check thyroid function (TSH) if none of the above and patient has any of pulse ≥ 100, tremor, irritability, dislike of hot weather or thyroid enlargement.

Refer within 1 month for further investigation the patient with persistent documented weight loss and no obvious cause.

# Guide: Evidence database

The screenshot displays the 'Recommendation' and 'References' sections of an evidence database. Annotations with arrows point to specific features:

- Recommendation from PACK:** Points to the 'Recommendation' text area, which contains clinical guidance on hypoglycaemia management.
- Website link to Best Practice reference:** Points to the 'Web link' field in the 'References (Single entry)' section, which contains a URL to a BMJ Best Practice monograph.
- Reference Text from Best Practice:** Points to the 'RefText' column in the 'References (Table format)' table, which contains the text from the Best Practice monograph.
- Reference text from WHO guideline:** Points to the 'RefText' column in the 'References (Table format)' table, which contains the text from the WHO guideline.
- Reference text from Other sources:** Points to the 'RefText' column in the 'References (Table format)' table, which contains the text from other sources.
- Decision support for the localiser:** Points to the 'Additional info' tab in the 'Recommendation' section, which provides additional information for localisation.
- Best Practice Level of evidence:** Points to the 'Evidence level' field in the 'References (Single entry)' section, which is set to 'nil noted'.

**Recommendation** Rec Nr: 3

Recommendation for Page: Additional info | Structure/Section | Drugs/Tests

Recommendation: Glucose < 3.5mmol/L with/without symptoms:  
Give oral glucose orally. If decreased consciousness or glucose  $\leq 2.8$ mmol/L, give 50ml 50% glucose IV over 1-3 minutes instead. Repeat if glucose < 3.5mmol/L after 15 minutes.  
Give the patient food as soon as s/he can eat safely.

Focus: Management of hypoglycaemia:

Paraphrase text:

Note1 - Adaptor: If 50% glucose not available, substitute with 50% dextrose or other hypertonic glucose solution.

Note2 - Adaptor:

Categorisation: Management

# Guide: ePACK

## Pillar 2: Training principles

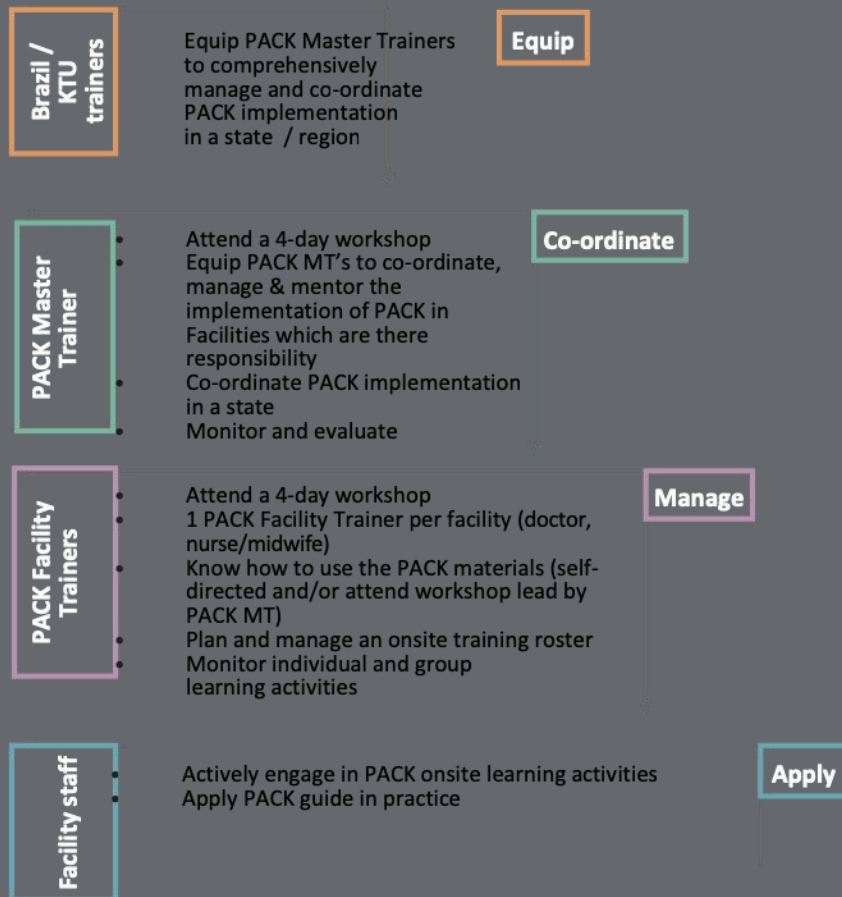

- *Educational outreach*
- *Capacitate and empower primary care clinicians as educators*
- *Team based training* for primary care health workers
- *On-site* (proximity)
- *Multi-event* over prolonged period
- *Interactive*
- *Case study focused*

*A nurse bringing a problem TB case to an on-site training group to work through using the guideline*

# Training: Cascade model

## Implementation and Training Plan

## Cascade Model

# Training: The waiting room scene

IZAK VOLLGRANT

## Training: Educational outreach session

## Pillar 4: Monitoring and evaluation

Overview of trial results: Modest but consistent improvements across a range of outcomes and behaviours from the results of 4 South African pragmatic RCT's

Absolute effect sizes in the range seen in implementation science trials (5-15%)

**Prescribing:** cotrimoxazole prophylaxis<sup>2</sup>, inhaled corticosteroids<sup>1</sup>, aspirin<sup>5</sup>

**Referral:** appropriate referral of severe and complex cases<sup>1,4</sup>

**Case detection:** HIV<sup>2</sup>, TB<sup>1,2,4</sup>

**Health care utilisation:** ↑ primary care visits, ↓ inpatient days<sup>4,6</sup>

# Pragmatic trials of the PACK approach

## **PALSA (Practical Approach to Lung Health in South Africa)**

2002-2003

40 clinics; 2000 patients; 3 month follow-up

Fairall LR *et al.* BMJ 2005;331:750-754

## **PALSA PLUS (Practical Approach to Lung Health and HIV/AIDS in South Africa)**

2004-2006

15 clinics; 10 136 patients; X month follow-up

Zwarenstein M *et al.* BMJ 2011; 342:d2022.

## **STRETCH (Streamlining Tasks and Roles to Expand Treatment and Care for HIV)**

2008-2010

31 clinics; 16 483 patients; median 18 months' follow-up

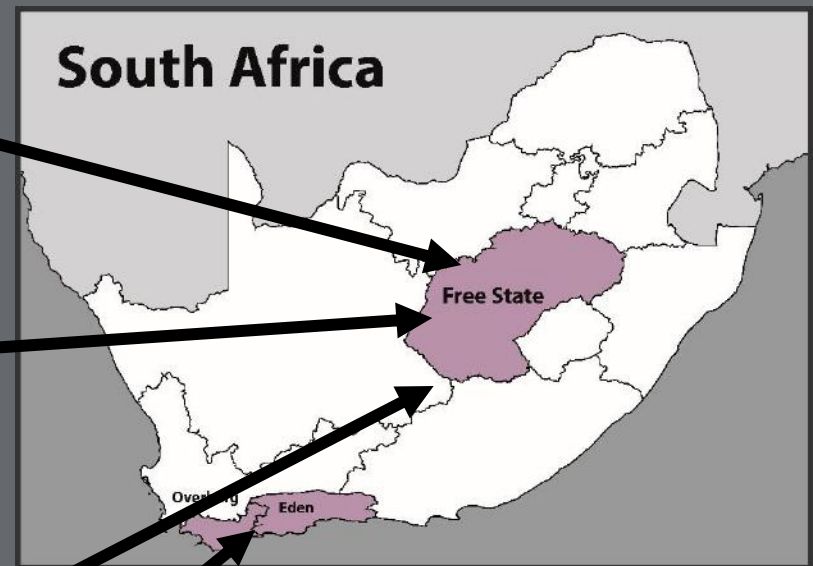

Fairall LR *et al.* Lancet 2012; 380:889-98.

## **Primary Care 101**

2011-2013

38 clinics; 4 393 patients; 14 months' follow-up

Fairall LR, Folb N *et al.* PLoS Med 13(11): e1002178.

# Pragmatic trials of the PACK approach

## **PRIME (Programme for Improving Mental Health Care)**

2014 ongoing

20 clinics; X patients; 12 months' follow-up

ClinicalTrials.gov: NCT02425124

## **CobALT (CO-morBidity of AIDS/ HIV Affective disorder, and Long-Term Health)**

2014 ongoing

40 clinics; X patients; 12 months' follow-up

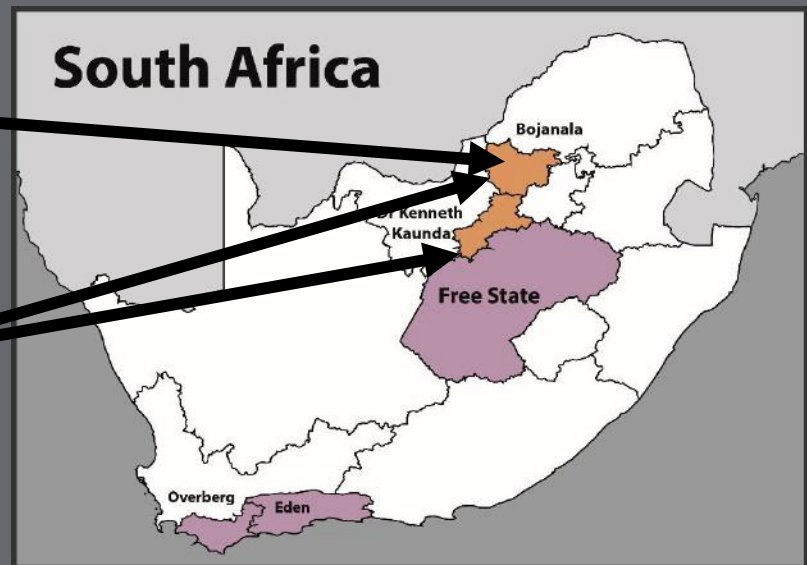

ClinicalTrials.gov: NCT02407691

## **Effect on respiratory outcomes in Florianópolis**

2016 ongoing

48 clinics; X patients; 12 months' follow-up

ClinicalTrials.gov: XXX

# Impact on primary healthcare workers: to equip & empower

*"A tool for every day for every patient."*

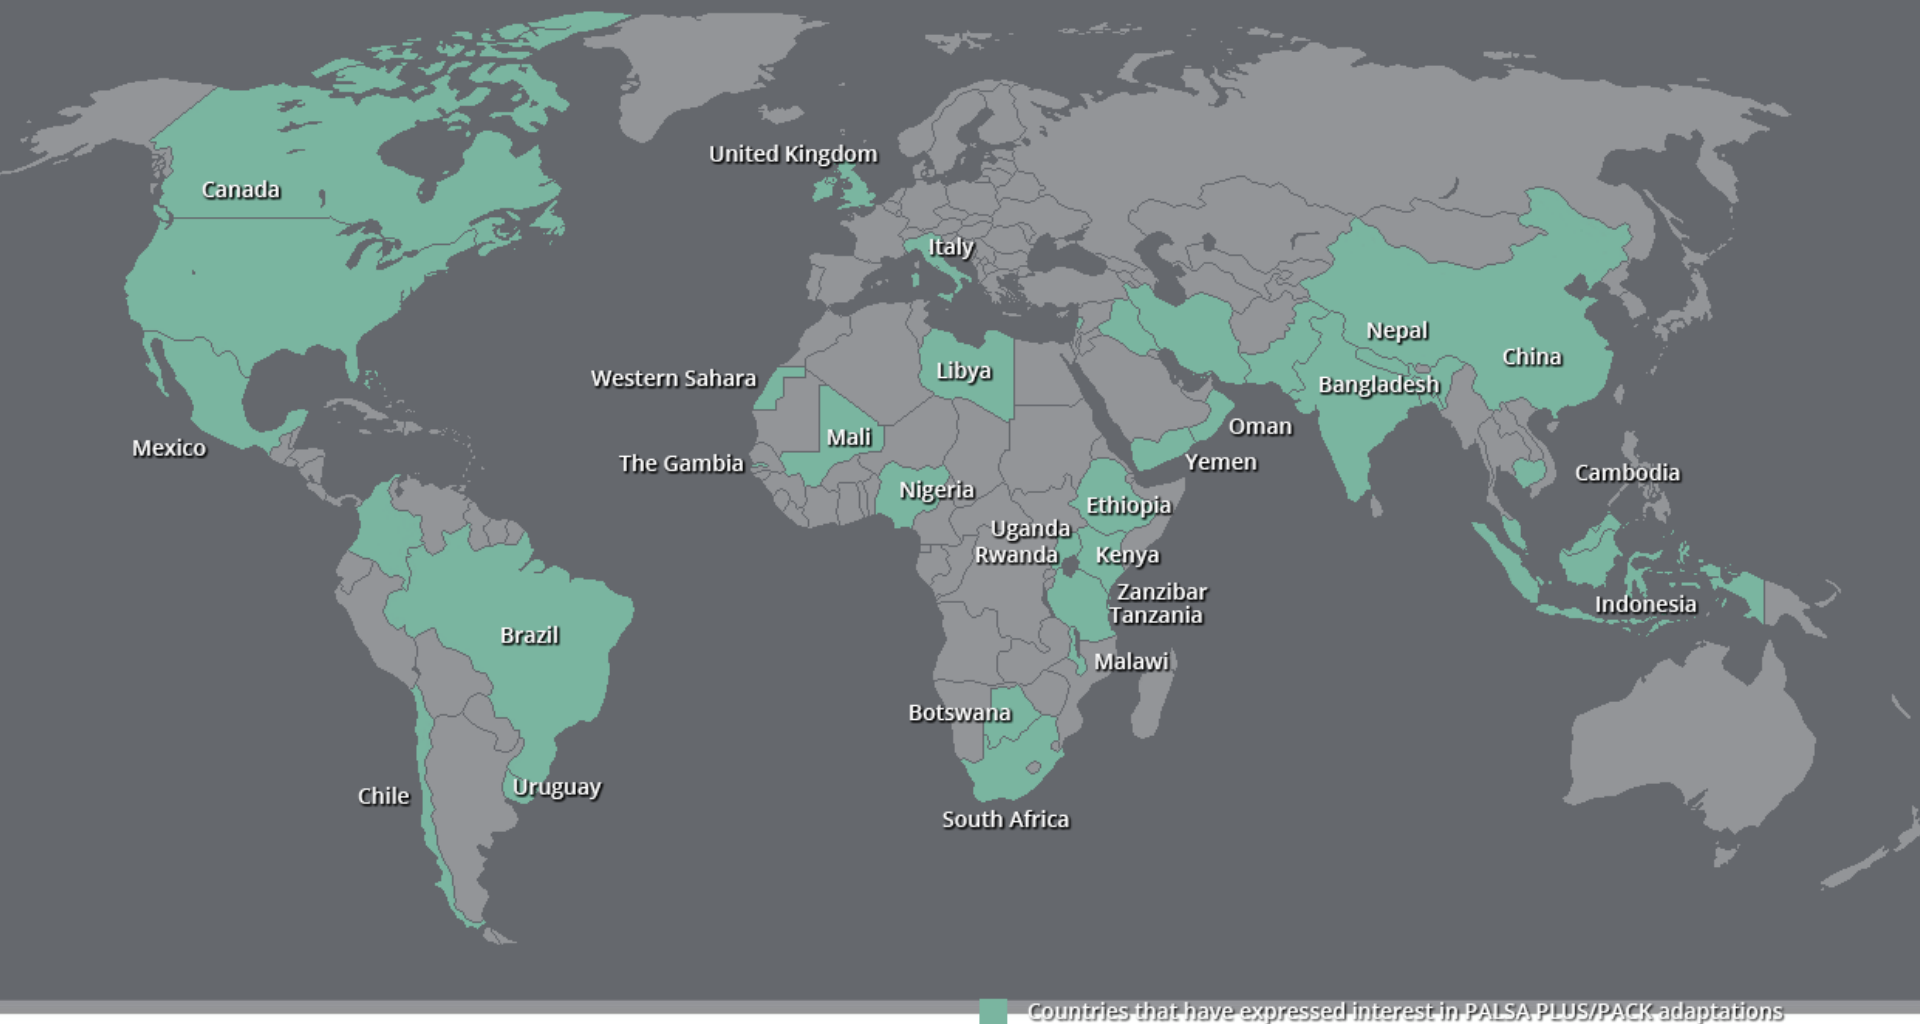

*"Our bible..."*

# Country interest in the PACK programme

# Impact on healthcare workers: to empower

*"A tool for every day for every patient."*

# PACK: KEY MESSAGES

## BMJs GLOBAL HEALTH PROGRAMMES:

- 1: Publishing - BMJ GH journal, HINARI access
- 2: Clinical Decision Support & Online Learning: CDS programme (Ukraine, Georgia, Azerbaijan, Jordan & Vietnam) & PACK (SA, Brazil, Nigeria, Ethiopia), mNutrition
- 3: Events - GH focused events eg East Africa Health summit 27 April (Uganda, Tanzania & Kenya)

## PACK EVOLUTION

PACK developed in South Africa over last 18 years by the UCTLI KTU team

**Purpose:** To equip and empower PHC workers in LMICs

**Status:** Fully upscaled and embedded in PHC in SA MoH services in the “Ideal Clinic” programme. Strong interest from other LMIC’s

KTU & BMJ have partnered to make PACK available globally

**How PACK is delivered:**

- 4 pillar programme
- 6 phases of implementation: engage, localize (6months), facility readiness (3 months), pilot training (6 months), review & evaluate (3 months), upscale ie. minimum 18 month pilot programme

## PACK ROADMAP:

- **Guide:**
  - Adult - Child - Community - Adolescent - Maternity
  - Print - eBook - mobile app - interactive mobile app
- **Training:**
  - Onsite to blended learning (onscreen +face-to-face)
  - CPD accredited
- **Health systems strengthening:**
  - PHC facility readiness – meds, equip, test availability
  - Task sharing & task-shifting
  - Referrals
- **M&E:**
  - Training data collection & analysis
  - Clinical outcome evaluation
  - Health Economic evaluation

Thank you

## Training materials localization

- PACK Global Adult Lead/Master Trainers manual
- PACK Global Adult Facility Trainers manual
- PACK Global Adult board game , instructions & answers
- PACK Global Adult waiting room scene
- PACK Global Adult cases – bank of approx. 45 cases in 4 modules
- PACK Global Adult key messages
- PACK Global Adult training attendance records
- PACK Overview video
- PACK Training video's x 4
- PACK Guide video
- PACK Global Adult programme infographic
- PACK Global Adult guide infographic
- PACK Global Adult overview presentation (slides)
- PACK Global Adult training presentation
- PACK Global Adult training file (cover and spine)
- PACK Global Adult training tools – print specifications
- PACK Global Adult – sample training certificates

## Guide localization

- PACK Global Adult guide (pdf)
- PACK Global Adult guide (Powerpoint) editable template
- PACK Global Adult Evidence and Decision Support document
- PACK Global Adult guide – equipment list, medication list, test list

PACK Global Adult guide – localization schedule

PACK Global Adult guide – printing specifications

## Recommendations:

- Localisation kick-off workshop
- Localisation “dry-run”
- Trello tool for managing localization
- Specialist input + Primary care clinician input
- Engagement workshops
- User testing
- Content integration
- Print sample test runs

# Knowledge into Practice: core principles of the PACK programme

**Addressing the needs of patient and provider in primary care**

**Evidence-informed implementation of evidence-informed care**

**Comprehensive: common symptoms and chronic conditions, 0-100 years**

**Team-based training within context of task-sharing**

**Easy to use: providers and in-country teams**

**Revised annually**

**Localised for each health system**

**Policy aligned**
