### Confronting Health Worker Burnout and Well-Being

Vivek Murthy, M.D., M.B.A.

**E**arly in the Covid-19 pandemic, when much of U.S. society shut down, health workers put their own safety on the line and kept going to work to care for patients. Although their com-

munities initially banged on pots, have died from Covid. More than cheered from their balconies, and half of health workers report

Covid-19 arrived. Causes include inadequate support, escalating workloads and administrative burdens, chronic underinvestment in public health infrastructure, and moral injury from being unable to provide the care patients need. Burnout is not only about long

We need to take care of our health workers and the rising generation of trainees.

On May 23, 2022, I issued a Surgeon General's Advisory on health worker burnout and well-being, declaring this crisis a national priority and calling the nation to action with specific directives for health systems, insurers, government, training institutions, and other stakeholders. The advisory is also intended to

# Institute of Medicines System Model of Clinical Burnout and Professional well-being (2019)

# The system model

- Three levels
- External environment
- Health care organisation
- Frontline care delivery

# External environment

- Health care industries
- Laws, regulations and standards
- Social values

# Health care organisation

- Leadership and management
- Governance
- Organizational reward and benefit

# Frontline care delivery

- Local organisational conditions
- Technologies
- Physical environment
- Activities

# Work system factors

## Job Demands

- Excessive workload, unmanageable work schedules, and inadequate staffing
- Administrative burden
- Workflow, interruptions, and distractions
- Inadequate technology usability
- Time pressure and encroachment on personal time
- Moral distress
- Patient factors

## Job Resources

- Meaning and purpose in work
- Organizational culture
- Alignment of values and expectations
- Job control, flexibility, and autonomy
- Rewards
- Professional relationships and social support
- Work–life integration

# Work system factors in the Danish context

- Work pace (nurses):
  - 72% experienced that there were too few nurses at work in relation to the work tasks
  - 61% always or often feel that it is necessary to work very quickly
- Working hours (nurses):
  - 91% indicate that they have worked more than their agreed working hours
  - 30% state that within the past month they have felt pressured to go to work on a day off

# Work system factors in the Danish context

- Mental work environment (nurses)
  - 25% state that they have had sick days as a result of bullying
- Physical working environment (nurses)
  - 28% have used medicine to cope with the working day
  - 25% has been exposed to one or more occupational accidents within a year
  - 15% have been exposed to unwanted sexual attention in their workplace within the past year
  - 14% have experienced punches, kicks, bites or sprains in the course of a year

# Individual mediating factors

- Personality and temperament
- Coping strategies
- Resilience
- Personal relationship and social support

# Outcomes

- Burnout
- Professional wellbeing

# Outcomes in the Danish context

- 40% of GPs meet the criteria for a moderate degree of burnout and 10% the criteria for a severe degree of burnout.
- Among Danish vascular surgeons, more than 80% reported burnout, of which 28% in a moderate to severe degree
- 22% of nurses indicate that they have always or often felt stressed during a two-week period
- 88% of nurses are considering changing jobs
- 61% of nurses fully or partially agree that there are conditions in working life that can make it difficult to stay in the labor market until retirement age

# Consequences for

- Patients (quality and safety)
- Clinicians
- Health Care Organizations
- Society

# Consequences on quality and outcomes in Denmark

## Patient safety:

- Only 43% of the nurses answer that they can 'to a great extent' or 'to a very high extent' carry out the work to a quality that they are satisfied with.
- 31% of nurses indicate that busyness or understaffing within the past month has been a contributing factor in a patient's condition worsening.
- 16% state that busyness or understaffing has been a contributing factor in a life-threatening situation for a patient.

# Consequences on quality and outcomes international

## Healthcare quality:

- Correlation between a poor working environment and poorer clinical performance in diagnostics and treatment (Guo, 2022. Riskin, 2015).

## Organizational quality:

- A reduction in productivity to the extent of 20% has been demonstrated as a consequence of a poor mental working environment (Guo, 2022. Berry, 2012, Lewis, 2011. Hutton, 2008).

## Results:

- A poor mental working environment is associated with more (10-20%) postoperative complications (Cooper, 2019).

# Learning and improvement

## Model for Improvement

What are we trying to accomplish?

How will we know that a change is an improvement?

What change can we make that will result in improvement?

**Flexible, fair, and transparent roster planning  
considering physician well-being and training  
opportunities enhances junior doctor job satisfaction  
and patient safety**

*Line Engelbrecht Jensen, Capital Region of Copenhagen*

Flexible, fair, and transparent **roster planning** considering **physician well-being** and **training opportunities** enhances junior doctor **job satisfaction** and **patient safety**

Line Engelbrecht Jensen, MD

## Background

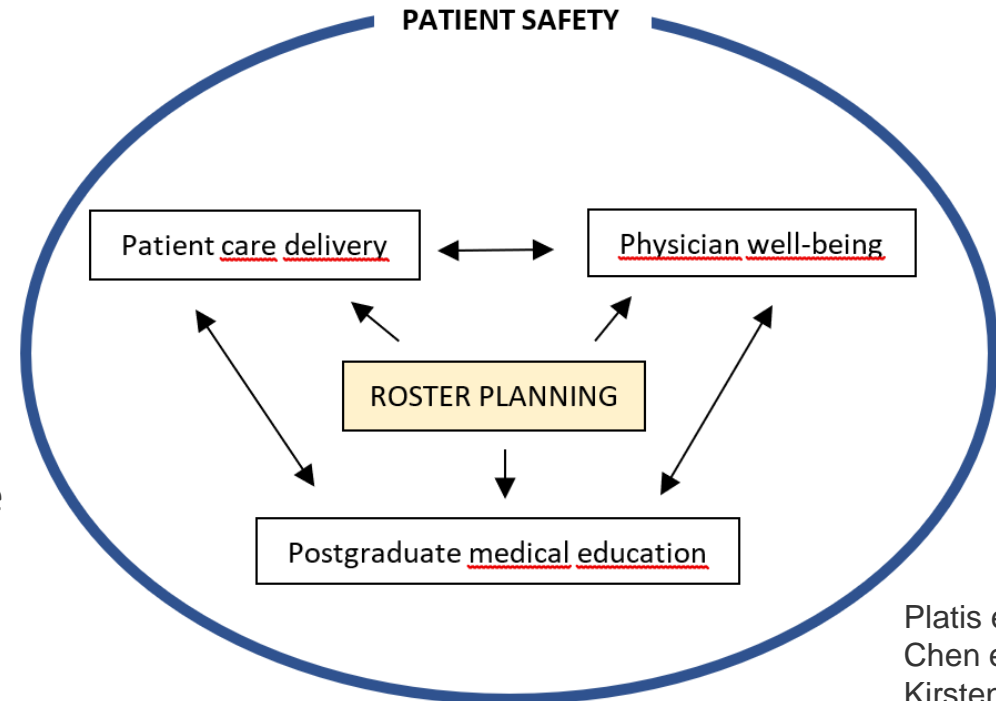

- Lack of staff incl. doctors, especially specialists/consultants
- Increase in demand: more elderly, more people with chronic illnesses, rising expectations to health care, expanded treatment options.
- Decreased capacity for delivering medical education: Educators retiring, Covid-19 pandemic, lack of nurses, private practice takes over the easy cases without educational obligations.
- New generation of doctors: hopes and dreams for variation, personal development, and work-life balance.

Højgård et al 2017  
Mitchell et al 2008

# Background

- Strong link between physician well-being, working environment and patient safety
- Roster planning is diverse
- Focus on human resources to be able to
  - deliver core health services
  - provide well-educated professionals
  - secure health and retention of the workforce

Platis et al 2015  
Chen et al 2015  
Kirsten 2010

## Aim of the pilot study

- To focus on roster planning for **junior doctors undergoing postgraduate medical education**
- To identify and explore **key elements in roster planning** and how this influences
  - postgraduate medical education
  - working environment
  - well-being

of junior doctors working in a Danish surgical department.

## Methods

- Interview study building on dialog-based knowledge generation theory
- Six semi-structured interviews
  - three junior doctors (Newly graduated; GP specialist training; Last year surgical residency)
  - three rostering stakeholders (Senior consultant; Local rota coordinator; Regional head of workforce management)
- Analysis
  - Epistemological inductive approach
  - Social constructivist scientific theory framework

## Limitations

- Pilot
- Low number of participants
- Limited to one surgical department
- Danish set-up, regional and local differences
- Only one investigator
- Based on perception of the participants

## Results and analysis

### Themes

- Work-life balance
- Flexibility, cooperation and trust
- Fairness
- Education
- Power structures

## Work-life balance

*"I don't think I do my work differently, but I may become a worse colleague. I don't have the energy to help others out or chip in on extra work. And at home, they can feel it."*

*"When [my] competencies don't match the situation. It's a very important factor in roster planning that you are never alone with something you don't have the competencies for."*

*"Before the roster, we make our own roster at home. When the roster arrives, the first thing that happens is that it becomes part of our Gmail calendar together with plans for child drop-off and pick-up responsibilities every day of that month."*

*"[The roster] means a lot to our everyday life. It's about not being able to attend functions with one's children or missing out on family birthdays because of these evening-and-night shifts. As a mother, you want to attend these things, not for you personally, but for your children. It plays a role in how successful I feel in my other role as a mother."*

# Work-life balance

## Challenges

- Logistics related to working shifts (family time)
- Missing out on social gatherings and family time
- Physical and mental strain
- Accepted largely due to the meaningfulness of the job

## Consequences

- Incoherent planning may cause stress, burnout and disease
- Predictability, timely adequacy and influence on rosters are positive factors

## Flexibility, cooperation and trust

*"I think that it is a joint responsibility of the duty team that the department and our responsibilities within it run smoothly."*

*"It wouldn't be worth it if I felt that there was no flexibility whatsoever, if I could never leave early or someone else could take the evening part of my shift. In general, we as colleagues are very flexible and help each other out. Maybe because we are all in the same boat. There is a high degree of cooperation."*

*"I have experienced that some people have [taken operations]. But I didn't make a fuss about it, I just thought that on their own heads be it. Because in the future, they make it difficult to cooperate with them. Something like that is never forgotten"*

*"I only submit roster requests to a degree where my family can function, with the hope and trust that the others do the same."*

## Flexibility, cooperation and trust

- Flexibility is highly valued
- Sense of community in performing the core task enforces cooperation and trust
- Collegiality enhances job satisfaction and well-being
- Detailed control and rigid structures leads to frustration, decreased collegiality and lack of cooperation.

## Fairness

*"In the case where I for example have had many shifts and extra shift and lost OR days, then it means a lot to me [if the distribution is not fair]. The roster planner should know that you can't just give all the OR days to the same two people!"*

*"It's alright, if the communication is sufficient. (...) I would much rather hear why and that they know it's a lot to ask, if they have to break the union rules. Better up-front than me being angry about it afterwards."*

*"When I get my roster, I focus on if my responsibilities are fairly distributed. Not so much compared to the others, but more to see if I got sufficient educational content."*

## Fairness

- It is important that the workload and especially the educational elements are fairly distributed
- They are willing to put in an extra effort for the core task and for their colleagues if the distribution is fair
- Perceived fairness and social capital is enhanced by
  - Transparency
  - Flexibility
  - Influence

## Education

*"It's my responsibility that [my patient] gets the right treatment. This responsibility means that I have to have the competencies to stand alone with the treatment responsibility, that I feel competent enough. It's about training and supervision."*

*"In an ideal world, I would appreciate if someone cared about my education. But I think [the lack of coordination of education] is to be expected in a public health care system where focus is on so many other things."*

*"And it means the world to me that there is a focus on that I learn something while I'm here. It's more important that there is an educational content. Then I don't mind working extra hours"*

*"Being in an educational position, I expect and hope to learn the things I'm supposed to learn while being here. And I feel that this has been thought about."*

## Education

- Good education is strongly linked to job satisfaction and well-being
- Education as integrated part of patient care enhances physician well-being, work environment and hence patient safety
- Education is perceived as an individual responsibility, but:
- Improvement when the junior doctor is planned as part of the community of practice

## Power structures

*"I would probably ask my clinical advisor or the consultant responsible for my education if my questions were related to my education. They could probably guide me in the right direction. Or I would ask the union representative if I had problems related to the union rules or social issues."*

*"I have a feeling that the thing with clinical supervisors and educational meetings with my supervisor is being treated quite laissez-faire. I don't think anyone other than myself is looking after if I reach my educational requirements."*

*"I don't know who is responsible for my roster. A secretary I guess. I don't know whom to call my immediate leader, good question! Is it the chief of department? My clinical supervisor? The consultant responsible for my education maybe?"*

## Power structures

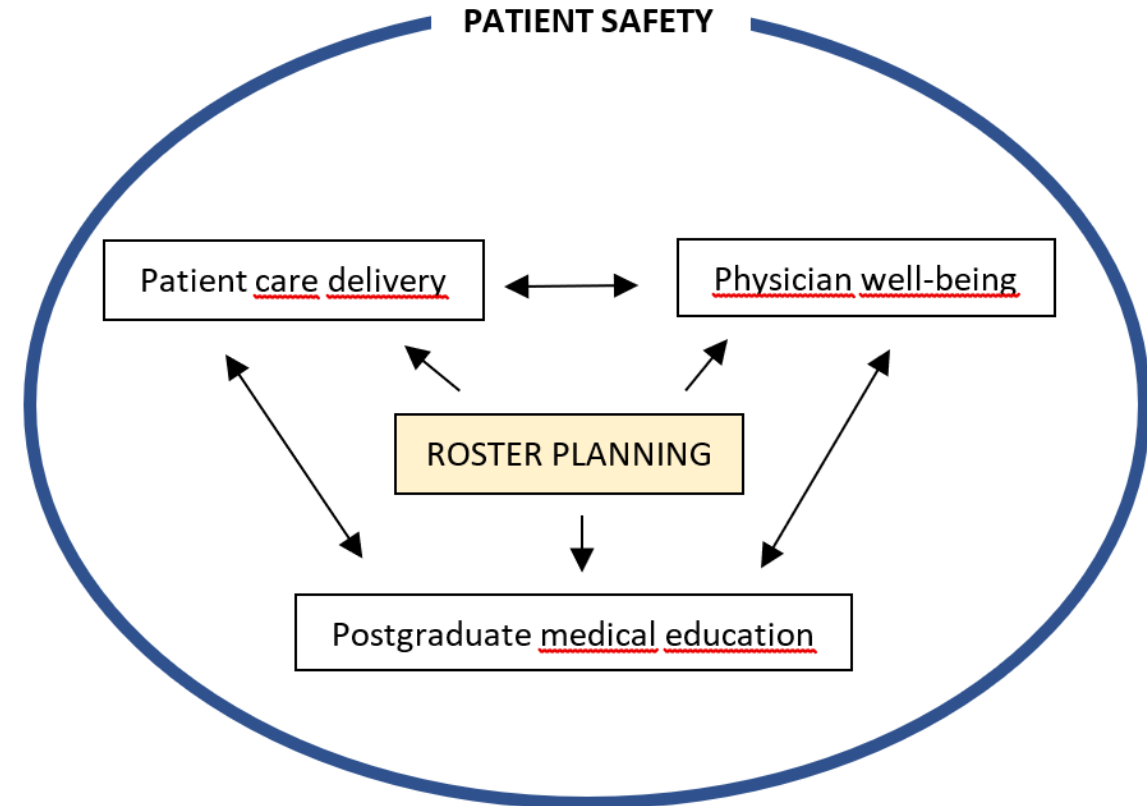

- Lack of clarity in the pathways of power – immediate manager/leader of the junior doctors? Responsible for rosters?
- The person to approach differs and does not necessarily have the power
  - work planning
  - physician well-being or family issues
  - personal problems
  - educational matters
- Focus on transparent power structures may improve rosters and well-being

## Conclusion

It's beneficial for **education**, physician **well-being** and the **core task** when roster planning is carried out with **transparency** and **physician involvement**.

Flexible, fair, and transparent roster planning considering **physician well-being** and **training opportunities** enhances junior doctor job satisfaction and patient safety.

# Perspectives

## Study 3: Exploring interview study

### *Title*

Good rostering practices in relation to postgraduate medical education – learning from Danish departments with documented good education and high job satisfaction among junior doctors

### *Aim*

To uncover and evaluate good rostering practices from departments with documented good education and high job satisfaction among junior doctors with a special focus on postgraduate medical education and how departments manage to relay theory into practice.

### *Method*

Qualitative mixed-methods study where individual and focus group interviews with relevant stakeholders are combined with analysis of available written procedures.

## Study 4: Prospective organisational development study

### *Title*

Educationally focused rostering in a newly reorganised emergency department of digestive disorders.

### *Aim*

To create a map of the already existing knowledge on hospital roster planning for junior doctors undergoing postgraduate medical to find modalities and initiatives related to roster planning that impacts postgraduate medical education.

### *Method*

Scoping review following the guidelines for Preferred Reporting Items for Systematic reviews and Meta-Analyses extension for Scoping Reviews (PRISMA-ScR Statement).

Simulation Information / Event Log

Best View

00:17

Placerer patient i Fowler's lege

00:17

Det var korrekt at lindre patienten i Fowler's, for at give patientens mulighed for at udføre den tilfælde af manøvre.

00:18

Fastgør udøver korrekt på patienten

00:18

Det var korrekt at fastgøre udøveren korrekt, så patienten får den ordnede mængde W.

00:21

Justerer åndedrætsapparatet i Lumen

00:21

Manøvre blev ikke udført op til den ordnede mængde W. For lidt eller for meget af kan patienten være forvirret for patienten, (fx kulde, varmt, kold, varm, kold, varm). En ordning skal altid følges, med mindre lægen anviser.

00:24

Spørger patienten om BRØNDEN fungerer

00:24

Det var korrekt at spørge patienten om udførelsen af BRØNDEN. Hermed oplyser du patienten om det og patienten, og sikrer dig, at BRØNDEN fungerer tilfredsstillende.

00:25

Observerer respiration

00:25

Det var korrekt at tjekke respirationsfrekvensen. Hermed kvalitetsbedømmer du patientens behandling og pleje.

00:27

afslut proceduren

00:27

Information om behandlingen af patienten blev ikke givet. Sundhedsplejersken forklarer, at en sundhedsplejerske altid skal informere og sikre sig, at patienten har forstået en given behandling.

00:27

Fastgør ikke tilslutning

00:27

Det er forkert at bruge fastgørelse til patienten, som får fastgørelse til i mere end 24 timer, efter som patienten udfører i de ydre tilslutninger, f.eks.

00:27

Udøver blev ikke sammenkædet. Du kan også kontrollere, at udøveren er korrekt tilsluttet ved den ordnede åndedrætsapparat.

00:27

Udførelsen blev ikke observeret. En intervention skal altid følges op med observation for at patientens situation er forbedret eller forværret som følge af interventionen, og om yderligere tilgængelige er nødvendige.

00:27

Håndhygiejne blev ikke udført efter proceduren. Det blev ikke udført håndhygiejne efter du returnerer patienten for at reducere smitten.
